Your Individual Needs Our Individual Solutions

Whether you are in the public or private sector, the environmental issues you face are becoming increasingly complex. Realizing no one solution will satisfy every situation, ESG is adept at finding the right strategy for your particular need. Our goal is to ensure every project we undertake is performed with speed, accuracy and at the lowest possible cost.

Dedicated Professionals Documented Results

ESG's highly qualified staff brings together the disciplines of engineering, geology, hydrogeology and environmental science. This diversity ensures your project is examined from every angle and solutions are multifaceted. Upon completion of a project, we present our reports in an easy to understand format. This allows you to better interpret the results and understand our recommendations.

Regulations, Requirements and Remediation

Specializing in regional issues, ESG has won regulatory approval for Corrective Action Plans (CAP) in Indiana and Illinois. We effectively communicate with local, state and federal regulatory agencies and work to minimize remedial activity by using state allowed risk assessment and natural attenuation programs. ESG's goal is to uncover the most cost effective solution while limiting your liability under current regulatory framework.

Environmental Liability

In recent years, the lease or sale of commercial, industrial, and multi-family real estate has become complicated by environmental liabilities, which may transfer along with the property. With the increase in scope and enforcement of environmental laws, potential owners and buyers of property have to become more concerned about property conditions and compliance status.

A Spectrum of Services

A full service consulting firm, ESG is comprehensive in its scope of services. From initial review through any necessary corrective action or remediation, our goal is to ensure your complete satisfaction.
